Opposition to the rezoning of parcel to 120 units or R24 per acre

I would like to state that the proposed development violates several articles of the Chapter 19.08.020 Development Standards of the General Plan:

- A. To ensure that the new development will not negatively impact the use and enjoyment of adjacent and neighboring properties;
- C. To increase design capability between abutting properties and land use;
- D. To reinforce a sense of community and to preserve the integrity of the neighborhoods.

Hot Endeavors is proposing to increase the density of the last remaining lot in the neighborhood by more than double what exists there today. This clearly violates the development standards of 19.08.020. Additionally, approximately 75% of the lot size is available for construction due to power easements running across the property, therefore the parcel should not be considered as 5 acres for development, but rather 4.1 acres, which is the true usable amount of land for development. Because the developer can only build on 4 acres the density he proposes is actually closer to R30. In order to develop this 120 unit complex, these large buildings are being placed on the perimeters of the property negatively impacting the enjoyment of the adjacent and neighboring properties. My unit in particular, will be most negatively impacted by the construction of a 24 unit complex that will be only 18 feet from property line at the point next to my 4 unit structure. This is in contrast to the five of the other proposed 12 unit structures on the parcel that are further away from neighboring properties.

At the neighborhood meeting we were shown the structures, but not shown any floor plans or layout other than told these units would be 600-800 sq ft. This is not in keeping with the integrity of the neighboring homes which are a minimum of 1200 feet to approximately 1700 sq ft. These small rental units will degrade the integrity of the primarily home owners' neighborhood and the units are being designed smaller solely to increase the density of the parcel rather than increase design capability between abutting properties.

There are only 111 parking spaces planned for this adult community of 120 units. While it is being called a senior center the actual age limit is 55. At 55 years most adults still need to work at least another 10 years before retirement so to say these people won't be working or driving cars is not realistic. The increase traffic from this many units will greatly detract from the sense of community as over 400 homes try to access this double dead ended road and Roland Wiley. Within 200 feet of the proposed construction is our town home entrance which is only about 30 feet from the stop sign on to Roland Wiley. The increased traffic will make maneuvering the turn to the stop sign more dangerous when the anticipated 64 cars, or one car a minute start heading out toward Westcliff Dr.

20N-13367
SDR-13866

at peak times. When I spoke with the city traffic engineer he agreed that our ingress/egress is not designed to enter into oncoming traffic of higher density and that with today's zoning this design would not be allowed. Built with standards and expectations of ten years ago the street is not designed to accept such a heavy influx of traffic from this cul-de-sac.

All the developed residential homes on this double dead end street are a density of R12 or lower. To allow an increase of over double the density on the corner lot would not reinforce a sense of community or preserve the integrity of the neighborhoods. At the neighborhood meeting the developer said the since the Angel Park Apartments are R16 that should make it ok for them to get R25 approval. As one of the neighbors most heavily impacted by this zoning change I would like to recommend that the zoning for this parcel be restricted to R17. This is slightly larger than the Angel Park apartments that enter directly onto Westcliff Dr, not our dead end street. To achieve this R17 or 85 units, I would like to see the developer restricted to the seven structures they propose and that each of the structures is no larger than 12 units per structure with a minimum of 800 sq ft. per unit. This will only require them to downsize the 24 unit structure from next to my unit and the 18 unit structure next to Angel Park. Having 84 units will allow for at least 1.3 parking spaces per unit and will reduce the some of the impact to the town homes that border the property by increasing landscaping along the perimeters.

Finally I would like to state that there has been no sign on this property stating the proposed changes. Many residents are not even aware of where the parcel is and mistakenly believe the notices mailed to our homes are related to the recently completed assisted living center that was also built on Silver Sky. If the developer is legally required to post a sign for a certain amount of time, then the council should be compelled to deny a recommendation on this property until the legal process has been followed to notify the residents of the specific parcel to be developed.

Respectfully,

Anne R Murphy

**Opposition to the rezoning ZON-13867 to R25 per acre
And SDR-13866 for 120 unit senior apartments**

The proposed development violates several articles of the Chapter 19.08.020 Development Standards of the General Plan:

- A. To ensure that the new development will not negatively impact the use and enjoyment of adjacent and neighboring properties;
- C. To increase design capability between abutting properties and land use;
- D. To reinforce a sense of community and to preserve the integrity of the neighborhoods.

Hot Endeavors is proposing to increase the density of the last remaining lot on a dead end street in our neighborhood by more than double what exists there today. All the developed residential homes on this dead end, Silver Sky, are a density of R12 or lower. To allow an increase of over double the density on the corner lot would not reinforce a sense of community or preserve the integrity of the neighborhoods. This clearly violates the development standards of 19.08.020. Because of easements, the developer can only build on 4 acres so the density of the units is actually closer to R30. In order to develop this 120 unit complex, these large buildings are being placed on the perimeters of the property negatively impacting the enjoyment of the adjacent and neighboring properties. Our town homes, Starfire I, in particular will be most negatively impacted by the proposed construction of a 24 unit complex that will be only 18 feet from property line at the point next to several 4 unit structures.

These units are planned at 600-800 sq ft. This also is not in keeping with the integrity of the neighboring homes which average 1200 - 1700 sq ft. These small rental units will degrade the integrity of the neighborhood and the units are being designed smaller solely to increase the density of the parcel rather than increase design capability between abutting properties. 800 sq ft should be the minimum allowed.

There are only 111 parking spaces planned for this adult community of 120 units. While it is being called a senior center the actual age limit is 55. At 55 years you still need to work at least another 10 years before retirement so to say these people won't be working or driving cars is not realistic. With two cars per unit and visitors parking will be out on the street creating additional density problems. This parcel is 1/4 mile from the nearest bus stop which only has one bus running per hour so most residents will require a vehicle. There should be at least one parking space required per unit for this complex.

The increase in traffic from this many units will greatly detract from the sense of community when over 300 vehicles try to access this double dead end road and Roland Wiley. Our town home entrance is between the property on Silver Sky and stop sign to Roland Wiley. The stop sign is about 30 feet from Starfire's ingress/egress. This makes maneuvering to the stop sign even more dangerous if the proposed additional 120+ residents try to make their way past our entrance to the stop sign. **OPPOSED TO THIS DEVELOPMENT SITE PLAN**

- C. To increase design capability between abutting properties and land use;
- D. To reinforce a sense of community and to preserve the integrity of the neighborhoods.

Hot Endeavors is proposing to increase the density of the last remaining lot on a dead end street in the neighborhood by more than double what exists there today. All the developed residential homes on this double dead end street are a density of R12 or lower. To allow an increase of over double the density on the corner lot would not reinforce a sense of community or preserve the integrity of the neighborhoods. This clearly violates the development standards of 19.08.020. Because of easements, the developer can only build on 4 acres so the density of the units is actually closer to R30. In order to develop this 120 unit complex, these large buildings are being placed on the perimeters of the property negatively impacting the enjoyment of the adjacent and neighboring properties. Our town homes, Starfire II, in particular will be most negatively impacted by the planned construction of a 24 unit complex that will be only 18 feet from property line at the point next to several 4 unit structures.

These units are planned to be 600-800 sq ft. This also is not in keeping with the integrity of the neighboring homes which average 1200 - 1700 sq ft. These small rental units will degrade the integrity of the home owners' neighborhood and the units are being designed smaller solely to increase the density of the parcel rather than increase design capability between abutting properties. 800 sq ft should be the minimum allowed.

There are only 111 parking spaces planned for this adult community of 120 units. While it is being called a senior center the actual age limit is 55. At 55 years you still need to work at least another 10 years before retirement so to say these people won't be working or driving cars is not realistic. This area is also ¼ mile from the nearest bus stop which only has one bus running per hour so most residents will require a vehicle. There should be at least one parking space required per unit for this complex.

The increase traffic from this many units will greatly detract from the sense of community when over 300 vehicles try to access this double dead end road and Roland Wiley. Our town home entrance is between the property on Silver Sky and stop sign to Roland Wiley. The stop sign is about 30 feet from Starfire's ingress/egress. This makes maneuvering to the stop sign even more dangerous if the proposed additional 120+ residents try to make their way past our entrance to the stop sign.

**Opposition to the rezoning ZON-13867 to R25 per acre
And SDR-13866 for 120 unit senior apartments**

The proposed development violates several articles of the Chapter 19.08.020 Development Standards of the General Plan:

- A. To ensure that the new development will not negatively impact the use and enjoyment of adjacent and neighboring properties;
- C. To increase design capability between abutting properties and land use;
- D. To reinforce a sense of community and to preserve the integrity of the neighborhoods.

Hot Endeavors is proposing to increase the density of the last remaining lot on a dead end street in the neighborhood by more than double what exists there today. All the developed residential homes on this double dead end street are a density of R12 or lower. To allow an increase of over double the density on the corner lot would not reinforce a sense of community or preserve the integrity of the neighborhoods. This clearly violates the development standards of 19.08.020. Because of easements, the developer can only build on 4 acres so the density of the units is actually closer to R30. In order to develop this 120 unit complex, these large buildings are being placed on the perimeters of the property negatively impacting the enjoyment of the adjacent and neighboring properties. Our town homes, Starfire II, in particular will be most negatively impacted by the planned construction of a 24 unit complex that will be only 18 feet from property line at the point next to several 4 unit structures.

These units are planned to be 600-800 sq ft. This also is not in keeping with the integrity of the neighboring homes which average 1200 - 1700 sq ft. These small rental units will degrade the integrity of the home owners' neighborhood and the units are being designed smaller solely to increase the density of the parcel rather than increase design capability between abutting properties. 800 sq ft should be the minimum allowed.

There are only 111 parking spaces planned for this adult community of 120 units. While it is being called a senior center the actual age limit is 55. At 55 years you still need to work at least another 10 years before retirement so to say these people won't be working or driving cars is not realistic. This area is also ¼ mile from the nearest bus stop which only has one bus running per hour so most residents will require a vehicle. There should be at least one parking space required per unit for this complex.

The increase traffic from this many units will greatly detract from the sense of community when over 300 vehicles try to access this double dead end road and Roland Wiley. Our town home entrance is between the property on Silver Sky and stop sign to Roland Wiley. The stop sign is about 30 feet from Starfire's ingress/egress. This makes maneuvering to the stop sign even more dangerous if the proposed additional 120+ residents try to make their way past our entrance to the stop sign.

**Opposition to the rezoning ZON-13867 to R25 per acre
And SDR-13866 for 120 unit senior apartments**

The proposed development violates several articles of the Chapter 19.08.020 Development Standards of the General Plan:

- A. To ensure that the new development will not negatively impact the use and enjoyment of adjacent and neighboring properties;
- B. n/a
- C. To increase design capability between abutting properties and land use;
- D. To reinforce a sense of community and to preserve the integrity of the neighborhoods.

Hot Endeavors is proposing to increase the density of the last remaining lot on Silver Sky St, a dead end road in our neighborhood by more than double what exists there today. This area is already medium densely populated by residential homes of R12 or lower. To allow an increase of over double the density on the corner lot would not reinforce a sense of community or preserve the integrity of the neighborhoods. **This clearly violates the development standards of 19.08.020. Additionally, because of power easements, the developer can only build on 4 acres so the density of the units is actually closer to R30. In order to develop this 120 unit complex, these large buildings are being placed on the perimeters of the property negatively impacting the enjoyment of the adjacent and neighboring properties.** This is in contrast to the recently built Silver Sky assisted living center and neighboring Angel Park Apts. which built away from the neighboring property lines.

These units are planned at 600-800 sq ft. This also is not in keeping with the integrity of the neighboring homes which average 1200 - 1700 sq ft. These small rental units will degrade the integrity of the neighborhood and the units are being designed smaller solely to increase the density of the parcel rather than increase design capability between abutting properties. **800 sq ft should be the minimum allowed to keep this area from turning into low cost housing and consequentially devaluing the property of neighboring homeowners. How will restrictions on these units be enforced? Will 21+ year olds be allowed to live with someone over 55?**

There are only 111 parking spaces planned for this adult community of 120 units. While this development is being called senior apartments the actual age limit is 55. Most 55 years old adults still need to work at least another 10 years before retirement so to say these people won't be working or driving cars is not realistic. This parcel is ¼ mile from the nearest bus stop which only has one bus running per hour so most residents will require a vehicle. Two cars for some of the units and visitors parking will be out on the street creating additional density and traffic problems. The entrance to this parcel is limited to one half of a cul-de-sac so all additional street parking will be in front of other home owner developments. **There should be at least 1.3 parking spaces required per unit for this complex and the development should be restricted to no more than 16 units per acre with set back limitations of 30 ft. to restrict encroachment of large structures onto neighboring homeowners. Units should be restricted to no greater than 12 per structure.**

To allow an increase of over double the density on the corner lot would not reinforce a sense of community or preserve the integrity of the neighborhoods. **This clearly violates the development standards of 19.08.020. Additionally, because of power easements, the developer can only build on 4 acres so the density of the units is actually closer to R30. In order to develop this 120 unit complex, these large buildings are being placed on the perimeters of the property negatively impacting the enjoyment of the adjacent and neighboring properties.** This is in contrast to the recently built Silver Sky assisted living center and neighboring Angel Park Apts. which built away from the neighboring property lines.

These units are planned at 600-800 sq ft. This also is not in keeping with the integrity of the neighboring homes which average 1200 - 1700 sq ft. These small rental units will degrade the integrity of the neighborhood and the units are being designed smaller solely to increase the density of the parcel rather than increase design capability between abutting properties. **800 sq ft should be the minimum allowed to keep this area from turning into low cost housing and consequentially devaluing the property of neighboring homeowners. How will restrictions on these units be enforced? Will 21+ year olds be allowed to live with someone over 55?**

There are only 111 parking spaces planned for this adult community of 120 units. While this development is being called senior apartments the actual age limit is 55. Most 55 years old adults still need to work at least another 10 years before retirement so to say these people won't be working or driving cars is not realistic. This parcel is ¼ mile from the nearest bus stop which only has one bus running per hour so most residents will require a vehicle. Two cars for some of the units and visitors parking will be out on the street creating additional density and traffic problems. The entrance to this parcel is limited to one half of a cul-de-sac so all additional street parking will be in front of other home owner developments. **There should be at least 1.3 parking spaces required per unit for this complex and the development should be restricted to no more than 16 units per acre with set back limitations of 30 ft. to restrict encroachment of large structures onto neighboring homeowners. Units should be restricted to no greater than 12 per structure.**

**Opposition to the rezoning ZON-13867 to R25 per acre
And SDR-13866 for 120 unit senior apartments**

The proposed development violates several articles of the Chapter 19.08.020 Development Standards of the General Plan:

- A. To ensure that the new development will not negatively impact the use and enjoyment of adjacent and neighboring properties;
- B. n/a
- C. To increase design capability between abutting properties and land use;
- D. To reinforce a sense of community and to preserve the integrity of the neighborhoods.

Hot Endeavors is proposing to increase the density of the last remaining lot on Silver Sky St, a dead end road in our neighborhood by more than double what exists there today. This area is already medium densely populated by residential homes of R12 or lower. To allow an increase of over double the density on the corner lot would not reinforce a sense of community or preserve the integrity of the neighborhoods. **This clearly violates the development standards of 19.08.020. Additionally, because of power easements, the developer can only build on 4 acres so the density of the units is actually closer to R30. These small rental units will degrade the integrity of the neighborhood and the units are being designed smaller solely to increase the density of the parcel rather than increase design capability between abutting properties. **1000 square feet should be the minimum allowed to keep this area from turning into low cost housing and consequentially devaluing the property of neighboring homeowners.**

There are only 111 parking spaces planned for this adult community of 120 units. While this development is being called senior apartments the actual age limit is 55. Most 55 years old adults still need to work at least another 10 years before retirement so to say these people won't be working or driving cars is not realistic. This parcel is ¼ mile from the nearest bus stop which only has one bus running per hour so most residents will require a vehicle. Two cars for some of the units and visitors parking will be out on the street creating additional density and traffic problems. The entrance to this parcel is limited to one half of a cul-de-sac so all additional street parking will be in front of other home owner developments. **There should be at least 1.3 parking spaces required per unit for this complex and the development should be restricted to no more than 16 units per acre with set back limitations of 30 ft. to restrict encroachment of large structures onto neighboring homeowners.** The seven proposed buildings should be restricted to no greater than 12 per structure.

**Opposition to the rezoning ZON-13867 to R25 per acre
And SDR-13866 for 120 unit senior apartments**

The proposed development violates several articles of the Chapter 19.08.020 Development Standards of the General Plan:

- A. To ensure that the new development will not negatively impact the use and enjoyment of adjacent and neighboring properties;
- B. n/a
- C. To increase design capability between abutting properties and land use;
- D. To reinforce a sense of community and to preserve the integrity of the neighborhoods.

Hot Endeavors is proposing to increase the density of the last remaining lot on Silver Sky St, a dead end road in our neighborhood by more than double what exists there today. This area is already medium densely populated by residential homes of R12 or lower. To allow an increase of over double the density on the corner lot would not reinforce a sense of community or preserve the integrity of the neighborhoods. **This clearly violates the development standards of 19.08.020. Additionally, because of power easements, the developer can only build on 4 acres so the density of the units is actually closer to R30. In order to develop this 120 unit complex, these large buildings are being placed on the perimeters of the property negatively impacting the enjoyment of the adjacent and neighboring properties.** This is in contrast to the recently built Silver Sky assisted living center and neighboring Angel Park Apts. which built away from the neighboring property lines.

These units are planned at 600-800 sq ft. This also is not in keeping with the integrity of the neighboring homes which average 1200 - 1700 sq ft. These small rental units will degrade the integrity of the neighborhood and the units are being designed smaller solely to increase the density of the parcel rather than increase design capability between abutting properties. **1000 square feet should be the minimum allowed to keep this area from turning into low cost housing and consequentially devaluing the property of neighboring homeowners.**

This parcel is ¼ mile from the nearest bus stop which only has one bus running per hour so most residents will require a vehicle. Two cars for some of the units and visitors parking will be out on the street creating additional density and traffic problems. The entrance to this parcel is limited to one half of a cul-de-sac so all additional street parking will be in front of other home owner developments. **There should be at least 1.3 parking spaces required per unit for this complex and the development should be restricted to no more than 16 units per acre with set back limitations of 30 ft. to restrict encroachment of large structures onto neighboring homeowners. Units should be restricted to no greater than 12 per structure.**

**Opposition to the rezoning ZON-13867 to R25 per acre
And SDR-13866 for 120 unit senior apartments**

The proposed development violates several articles of the Chapter 19.08.020 Development Standards of the General Plan:

- A. To ensure that the new development will not negatively impact the use and enjoyment of adjacent and neighboring properties;
- B. n/a
- C. To increase design capability between abutting properties and land use;
- D. To reinforce a sense of community and to preserve the integrity of the neighborhoods.

Hot Endeavors is proposing to increase the density of the last remaining lot on Silver Sky St, a dead end road in our neighborhood by more than double what exists there today. This area is already medium densely populated by residential homes of R12 or lower. To allow an increase of over double the density on the corner lot would not reinforce a sense of community or preserve the integrity of the neighborhoods. **This clearly violates the development standards of 19.08.020. Additionally, because of power easements, the developer can only build on 4 acres so the density of the units is actually closer to R30. In order to develop this 120 unit complex, these large buildings are being placed on the perimeters of the property negatively impacting the enjoyment of the adjacent and neighboring properties. This is in contrast to the recently built Silver Sky assisted living center and neighboring Angel Park Apts. which built away from the neighboring property lines.**

These units are planned at 600-800 sq ft. This also is not in keeping with the integrity of the neighboring homes which average 1200 - 1700 sq ft. These small rental units will degrade the integrity of the neighborhood and the units are being designed smaller solely to increase the density of the parcel rather than increase design capability between abutting properties. **800 sq ft should be the minimum allowed to keep this area from turning into low cost housing and consequentially devaluing the property of neighboring homeowners. How will restrictions on these units be enforced? Will 21+ year olds be allowed to live with someone over 55?**

There are only 111 parking spaces planned for this adult community of 120 units. While this development is being called senior apartments the actual age limit is 55. Most 55 years old adults still need to work at least another 10 years before retirement so to say these people won't be working or driving cars is not realistic. This parcel is ¼ mile from the nearest bus stop which only has one bus running per hour so most residents will require a vehicle. Two cars for some of the units and visitors parking will be out on the street creating additional density and traffic problems. The entrance to this parcel is limited to one half of a cul-de-sac so all additional street parking will be in front of other home owner developments. **There should be at least 1.3 parking spaces required per unit for this complex and the development should be restricted to no more than 16 units per acre with set back limitations of 30 ft. to restrict encroachment of large structures onto neighboring homeowners. **Opposition to the rezoning ZON-13867 to R25 per acre
And SDR-13866 for 120 unit senior apartments**

The proposed development violates several articles of the Chapter 19.08.020 Development Standards of the General Plan:

- A. To ensure that the new development will not negatively impact the use and enjoyment of adjacent and neighboring properties;
- B. n/a
- C. To increase design capability between abutting properties and land use;
- D. To reinforce a sense of community and to preserve the integrity of the neighborhoods.

Hot Endeavors is proposing to increase the density of the last remaining lot on Silver Sky St, a dead end road in our neighborhood by more than double what exists there today. This area is already medium densely populated by residential homes of R12 or lower. To allow an increase of over double the density on the corner lot would not reinforce a sense of community or preserve the integrity of the neighborhoods. **This clearly violates the development standards of 19.08.020. Additionally, because of power easements, the developer can only build on 4 acres so the density of the units is actually closer to R30. In order to develop this 120 unit complex, these large buildings are being placed on the perimeters of the property negatively impacting the enjoyment of the adjacent and neighboring properties.** This is in contrast to the recently built Silver Sky assisted living center and neighboring Angel Park Apts. which built away from the neighboring property lines.

These units are planned at 600-800 sq ft. This also is not in keeping with the integrity of the neighboring homes which average 1200 - 1700 sq ft. These small rental units will degrade the integrity of the neighborhood and the units are being designed smaller solely to increase the density of the parcel rather than increase design capability between abutting properties. **1000 square feet should be the minimum allowed to keep this area from turning into low cost housing and consequentially devaluing the property of neighboring homeowners.**

There are only 111 parking spaces planned for this adult community of 120 units. While this development is being called senior apartments the actual age limit is 55. Most 55 years old adults still need to work at least another 10 years before retirement so to say these people won't be working or driving cars is not realistic. This parcel is ¼ mile from the nearest bus stop which only has one bus running per hour so most residents will require a vehicle. Two cars for some of the units and visitors parking will be out on the street creating additional density and traffic problems. The entrance to this parcel is limited to one half of a cul-de-sac so all additional street parking will be in front of other home owner developments. **There should be at least 1.3 parking spaces required per unit for this complex and the development should be restricted to no more than 16 units per acre with set back limitations of 30 ft. to restrict encroachment of large structures onto neighboring homeowners. The seven proposed buildings should be restricted to no greater than 12 per structure.**
